

Integrate and automate your Security Operations.

With **WinGuard** from Advancis

- ✓ **Central Event Visualisation**
- ✓ **Vendor-neutral Integration**
- ✓ **Dynamic Workflows**
- ✓ **Dashboards & Reporting**
- ✓ **Modular and scalable**

Advancis WinGuard software application greatly simplifies and streamlines the complex workflows in security operations centers. It connects and unifies disparate sensors, devices and subsystems into a common user interface.

Operators are assisted with clear, consistent, and dynamic action plans to help manage critical incidents to daily routines. All actions are captured and centrally logged, such as event messages and user entries for faster and more comprehensive reporting.

WinGuard is built upon the new AOP (Advancis Open Platform) architecture enabling integrators and customers to extend the Advancis software itself as desired with new functions, adapters and individual UI components. There is virtually no limit to the use of custom components to help meet project-specific requirements.

Unified smart security operations center.

WinGuard reaches far beyond the common scope, offering the possibility for cross-domain integration of security systems, building management and communication systems. In addition, the connection and creation of interoperability across multiple disparate, and even 3rd party legacy systems offers a migration path that helps leverage prior investments.

With an existing library of over 550 interfaces to industry leading systems, WinGuard can be deployed rapidly across every vertical market applications. In addition, new adapters for new technologies or innovations can be developed using AOP, at scale.
